- Programming Languages
(Python, JavaScript, PHP, SQL)
- Frontend Development
(React, HTML5, CSS3, Bootstrap)
- Databases (MySQL, MariaDB, MongoDB (Atlas))
- DevOps & Server Management
(Linux (Ubuntu), Docker, Apache/Nginx, SSH, git, github)

PROFILE

Software Developer with hands-on experience in developing and maintaining web applications and business support tools. Knowledgeable in both frontend and backend development, API integration, and database management. Familiar with Linux server setup, basic server maintenance, and application deployment using tools like Docker and Apache/Nginx. Eager to continuously learn and improve technical skills while contributing to stable, efficient, and user-friendly systems. Able to work independently or as part of a team to deliver reliable solutions that support business operations.

WORK EXPERIENCE

D3.net

Software Developer

2002 - PRESENT

- Developed and maintained web-based applications.
- Built RESTful APIs using Python or JavaScript, depending on project requirements.
- Integrated MongoDB and MySQL databases, optimized queries, and implemented structured data storage.
- Designed and implemented rule-based message flow systems for chatbot automation.
- Managed Linux servers including deployment, configuration of Apache/Nginx, and system monitoring.
- Containerized applications using Docker and Docker Compose for easier deployment and scalability.
- Integrated messaging platforms such as WhatsApp and Messenger for automated customer interactions.
- Provided technical support, bug fixes, and system improvements for production environments.
- Ensured system stability by handling server configuration, SSL setup, firewall configuration, and service management using systemd.
